DECLARATION OF PERFORMANCE

DoP: 0084

for fischer Highbond-Anchor FHB II Inject (Bonded anchor for use in concrete) – **EN**

1. Unique identification code of the product-type: **DoP: 0084**

2. Intended use/es: **Post-installed fastening in cracked or uncracked concrete, see appendix, especially Annexes B 1 to B 7**

3. Manufacturer: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**

4. Authorised representative: **--**

5. System/s of AVCP: **1**

6. European Assessment Document: **ETAG 001; 2013-04**

   European Technical Assessment: **ETA-16/0637; 2017-01-24**

   Technical Assessment Body: **DIBt**

   Notified body/ies: **1343 – MPA Darmstadt**

7. Declared performance/s:

Mechanical resistance and stability (BWR 1), Safety in use (BWR 4)

- **Characteristic resistance for tension and shear loads: See appendix, especially Annexes C 1 to C 4**
- **Displacements under shear and tension loads: See appendix, especially Annex C 5 to C 6**

Safety in case of fire (BWR 2)

- **Reaction to fire: Anchorages satisfy requirements for Class A 1**
- **Resistance to fire: NPD**

8. Appropriate Technical Documentation and/or Specific Technical Documentation: ---

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2017-01-31

- This DoP has been prepared in different languages. In case there is a dispute on the interpretation the english version shall always prevail.
- The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Specific Part

1 Technical description of the product

The fischer Highbond-Anchor FHB II is a torque controlled bonded anchor consisting of a mortar cartridge with mortar fischer FIS HB and an anchor rod FHB II - A L or FHB II - A S with hexagon nut and washer.

The anchor rod is placed into a drilled hole filled with injection mortar. The load transfer is realised by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values under tension and shear load	See Annex C 1 to C 4
Displacements under tension and shear loads	See Annex C 5 and C 6

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specifications of intended use (part 1)

Table B1: Overview use and performance categories

Anchorages subject to		fischer Injection mortar FIS HB with…			
		FHB II Inj-A L 		**FHB II Inj-A S** 	
Hammer drilling with standard drill bit		all sizes			
Static or quasi static load, in	uncracked concrete	all sizes	Tables: C1, C3, C5	all sizes	Tables: C2, C4, C6
	cracked concrete				
Use category	dry or wet concrete	all sizes			
Kind of intallation	Pre-positioned anchor	all sizes			
	Push through anchor	all sizes			
Installation temperature		-5 °C to +40 °C			
In-service temperature		-40 °C to +80 °C	(max. long term temperature +50 °C and max. short term temperature +80 °C)		

Specifications of intended use (part 2)

Base materials:

- Reinforced or unreinforced normal weight concrete Strength classes C20/25 to C50/60 according to EN 206-1:2000

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure, to permanently damp internal conditions or in other particular aggressive conditions (high corrosion resistant steel)

  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with
- EOTA ETAG 001 Annex C, 08/2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Observe the effective anchorage depth
- Overhead installation is allowed

Table B2: Installation parameters for fischer Highbond-Anchor rods FHB II Inj-A L

Size FHB II Inj-A L				**M8 x 60**	**M10 x 95**	**M12 x 100**	**M12 x 120**	**M16 x 125**	**M16 x 145**	**M16 x 160**	**M20 x 210**	**M24 x 210**

Drill bit diameter	d_0	[mm]	10	12	14	16	18	25
Steel brush diameter	d_b		11	13	16	20		27

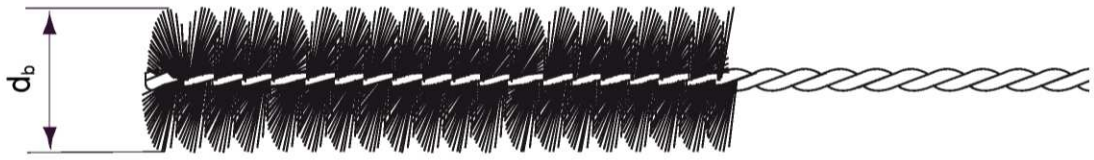

Table B5: Maximum processing time of the mortar **FIS HB** and minimum curing time
(During the curing time of the mortar the concrete temperature may not fall below the listed minimum temperature)

System temperature [°C]	Maximum processing time t_{work} [minutes]	Minimum curing time[1] t_{cure} [minutes]
-5 to ±0	----	6 hours
> +1 to +5	----	3 hours
> +6 to +10	15	90
> +11 to +20	6	35
> +21 to +30	4	20
> +31 to +40	2	12

[1] In wet concrete the curing times must be doubled

Installation instruction part 1

Installation with injection mortar FIS HB

Drilling and cleaning the hole

1		Drill the hole with hammer drill. Drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B2, B3**	
2		Blow out the drill hole twice. If necessary, remove standing water out of the bore hole.	
		For drill hole diameter $\mathbf{d_0}$ < 25 mm with hand-blowout or oil-free compressed air	 For drill hole diameter $\mathbf{d_0}$ = 25 mm with oil-free compressed air (p ≥ 6 bar) Use a cleaning nozzle.
3		Brush the bore hole twice. Corresponding brushes see **Table B4**	
4		Blow out the drill hole twice.	
		For drill hole diameter $\mathbf{d_0}$ < 25 mm with hand-blowout or oil-free compressed air	 For drill hole diameter $\mathbf{d_0}$ = 25 mm with oil-free compressed air (p ≥ 6 bar) Use a cleaning nozzle.

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)	
6		 Place the cartridge into the dispenser	
7		 Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey	
		Observe the processing time, t_{work} see **Table B5**	If the processing time is exceeded, use a new static mixer and if necessary remove encrusted material in the cartridge mouth.

Installation instruction part 2

Injection of the mortar

8		Fill approximately 2/3 of the drill hole with mortar. Exact quantity of mortar (travel scale on the cartridge) see instruction sheet. Fill the drill hole with mortar, always begin from the bottom of the hole to avoid bubbles
		**Push-through installation:** By using Highbond-Anchor rods **FHB II Inj-A L** the drill hole in the fixture must be also filled with mortar. If Highbond-Anchor rods **FHB II Inj-A S** are used, this is this not necessary.
		For drill hole depth ≥ 170 mm use an extension tube

Installation Highbond-Anchor rod FHB II Inj-A L and FHB II Inj-A S

9		Only use clean and oil-free anchor rods. Push the anchor rod down to the bottom of the hole, turning it slightly while doing so.
10		After inserting the anchor rod, excess mortar must be emerged around the anchor rod
		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges) 

11		Wait for the specified curing time t_{cure} see **Table B5**	12	 Mounting the fixture T_{inst} see **Tables B2 and B3**

Displacement under tension load										
Cracked concrete										
Tension load	[kN]	6,6	15,9	17,1	22,5	24,0	30,0	34,7	52,2	52,2
δ_{N0}	[mm]	0,8				0,6				
$\delta_{N\infty}$	[mm]	1,7								
Uncracked concrete										
Tension load	[kN]	9,3	22,3	24,0	31,6	33,6	42,0	48,7	73,2	73,2
δ_{N0}	[mm]	0,2	0,4						0,6	
$\delta_{N\infty}$	[mm]	1,7								
Displacement under shear load										
Uncracked or cracked concrete										
Steel zinc plated										
Shear load	[kN]	7,8	11,9	17,3		32,2			50,2	72,5
δ_{V0}	[mm]	1,2		1,3					3,5	
$\delta_{V\infty}$	[mm]	1,8		2,0					5,3	
Stainless steel A4										
Shear load	[kN]	8,7	13,3	19,3		35,8			55,9	80,6
δ_{V0}	[mm]	1,0		1,1		2,2			3,5	
$\delta_{V\infty}$	[mm]	1,5		1,7		3,3			5,3	
High corrosion resistant steel C										
Shear load	[kN]	8,7	13,3	19,3		35,8			55,9	80,6
δ_{V0}	[mm]	1,2		1,3		2,4			3,7	5,0
$\delta_{V\infty}$	[mm]	1,8		2,0		3,6			5,6	7,5

Table C6: Displacement for fischer **Highbond-Anchor FHB II Inj-A S**

Size FHB II Inj-A S		M10 x 60	M10 x 75	M12 x 75	M16 x 95	M20 x 170	M24 x 170
Displacement under tension load							
Cracked concrete							
Tension load	[kN]	6,6	11,1		15,9	38,0	
δ_{N0}	[mm]	0,8	0,3		0,4	0,6	
$\delta_{N\infty}$	[mm]	1,7					
Uncracked concrete							
Tension load	[kN]	9,3	15,6		22,3	53,3	
δ_{N0}	[mm]	0,2				0,5	
$\delta_{N\infty}$	[mm]	1,7					
Displacement under shear load							
Uncracked or cracked concrete							
Steel zinc plated							
Shear load	[kN]	11,3		12,7	29,0	45,9	65,3
δ_{V0}	[mm]	1,2		1,5		2,8	
$\delta_{V\infty}$	[mm]	1,8		2,3		4,2	
Stainless steel A4							
Shear load	[kN]	13,8		19,3	35,8	55,9	71,1
δ_{V0}	[mm]	1,0		1,1	2,2	3,5	
$\delta_{V\infty}$	[mm]	1,5		1,7	3,3	5,3	
High corrosion resistant steel C							
Shear load	[kN]	13,8		19,3	35,8	55,9	80,6
δ_{V0}	[mm]	1,2		1,3	2,4	3,7	5,0
$\delta_{V\infty}$	[mm]	1,8		2,0	3,6	5,6	7,5
