

Invisible fastening.

Spacer FTA-IPW / -IPA – The professional solution for the invisible fixation of ungrooved boards

Item	Art. No.	Description	Sales unit [pcs]
FTA-IPW 120 – 150 mm	539879	For Wood support rail with stainless steel screws C1 black 4 x 30 mm	50
FTA-IPA 120 – 150 mm	539880	For Aluminium support rail with stainless steel screws C1 black 4 x 30 mm and stainless steel drilling screws A2 3,9 x 19 mm	50

The spacer FTA-IPW / -IPA ensures a quick and invisible installation of decking boards providing a width between 120 – 150 mm. At the same time, an uniform installation pattern is guaranteed. About 15 – 20 pieces are needed per m², depending on board width.

ADVANTAGES AT A GLANCE

- Wood protection built right in, because of ventilation under the boards.
- Invisible fixation and variable adjustments depending on the board width.
- Uniform installation pattern. Distance between the boards is 5 mm.
- Special geometry relieves the decking structure of stresses, and therefore considerably minimizes the risk of shearing the screws.

Quick removal of decking beams – ideal for rented apartments (for moving).
