For the design the complete assessment ETA-17/0740 has to be considered. $^{7)}$

¹¹ The partial safety factors for material resistance as regulated in the ETA-17/0740 as well as a partial safety factor for load actions of γ_F = 1,4 are considered. As an single anchor counts e.g. an anchor with a spacing $s \ge 3 \cdot h_{of}$ and an edge distance $c \ge 1,5 \cdot h_{of}$. Accurate data see ETA-17/0740.

²⁾ For higher concrete strength classes up to C50/60 higher permissible loads may be possible.

³⁾ Drill method Hammer drilling resp. hollow drilling. For further allowable drill methods see ETA-17/0740.

⁴⁾ Maximum allowable torque for installation with any tangential impact screw driver.

⁵⁾ For combinations of tensile loads and shear loads or for shear loads with lever arm (bending moments) as well as reduced edge distances or spacings (anchor groups) we recommend to use our anchor design software C-FIX.

⁶⁾ Minimum possible axial spacings resp. edge distance while reducing the permissible load.

infimum possible axial spacings resp. edge distance while reducing the permissible load.

The given loads refer to the European Technical Assessment ETA-17/0740, issue date 23/10/2018. Design of the loads according TR055/ETAG 001, Annex C, Method A (for static resp. quasi-static).

⁸⁾ A reinforcement in the concrete to prevent splitting is required. The width of the cracks has to be limited under consideration of the splitting forces at $w_k \sim 0.3$ mm.

Concrete srew ULTRACUT FBS II

Highest recommended loads 1)3) for a single anchor, resp. a fixing point 4)5)6) in solid brick masonry.

Dana material	Compressive strength	Size		FBS II 8	FBS II 10	
Base material	[N/mm ²]	Anchoring depth	[mm]	65	85	
		hnom	[]		00	
Solid clay brick ⁹⁾ (EN771-1)	≥ 12	Frec 2)3)	[kN]	1,1	1,4	
≥ 240x113x115 mm	≥ 20	Frec ²⁾³⁾⁷⁾	[kN]	1,6	1,6	
Solid sand-lime brick ⁹⁾ (EN771-2)	≥ 12	Frec ²⁾³⁾⁷⁾	[kN]	1,2	1,2	
≥ 240x71x115 mm	≥ 20	Frec ²⁾³⁾⁷⁾	[kN]	1,2	1,2	
Aerated concrete (EN771-4) ≥ 499x249x120 mm	≥ 6	Frec ²⁾³⁾	[kN]	0,7	0,9	
Minimum spacing within anchor groups of 2 or 4	anchors	smin	[mm]	80		
Minimum spacing between single anchors, resp.	anchor groups	smin	[mm]	80		
Minimum distance to the horizontal joint	Cmin,v ⁸⁾	[mm]	20			
Minimum distance to the vertical joint		cmin,h ⁸⁾	[mm]	40		
Minimum distance to the free edge		cmin,free edge ⁸⁾	[mm]	200		
	Solid clay brick 9)			1	0	
Tightening torque 10)	Solid sandlime brick 9)	Ttighten	[Nm]	15		
	Aerated concrete			5		

An appropriate safety factor is considered.

- 3) The loads only apply to multiple fixings of non-load-bearing systems and are valid for tensile load, shear load and oblique load under any angle.
- 4 On-site screw testing is recommended to validate technical data. If the joints are not visible 100% anchor testing is recommended due to the screws are only working in the bricks and not in the mortar
- ⁵⁾ A fixing point can be a single anchor, 2 anchors or 4 anchors with a minimum spacing s_{min.} Anchor groups of 4 anchors are arranged in rectangular disposition.
- ⁶⁾ The fixing points have to be arranged in this way that there will be always maximum one fixing point arranged in one brick.
- 7) Brick pull-out is decisive.
- 11 The values c_{min.v} and c_{min.h} are only valid if the mortar joints are filled proper. Otherwise the joints has to be considered as free edges and c_{min.free} is decisive. Minimum mortar strenght is M2.5
- 9) The values are valid for unperforated solid bricks.
- 10) The screw is screwed in with a cordless screwdriver, an impact screwdriver or by hand. The screwing process must be finished immediately when the screw head is in contact with the assembled object. The specified tightening torque must then be applied with a torque wrench.

¹¹ The partial safety factors for material resistance as regulated in the ETA-17/0740 as well as a partial safety factor for load actions of $\gamma_E = 1,4$ are considered. As an single anchor counts e.g. an anchor with a spacing $s \ge 3 \cdot h_{ef}$ and an edge distance $c \ge 1, 5 \cdot h_{ef}$. Accurate data see ETA-17/0740.

²⁾ The given loads apply to the given brick measures for masonry with superimposed load. Bigger brick sizes are minimum equal in case of the loads.
